Requirements and Customer Journey

Phase 2 | Customer journey, requirements, data flow, and technology stack

Customer journey

Step	Passenger action	System response
1	Opens Book a Ticket in Service Portal	Displays the configured catalog form.
2	Chooses source and destination	Uses references to Metro Station Details records.
3	Chooses journey type and passenger count	Fare client script displays an amount.
4	Chooses payment mode	UI policy reveals an extra required field for Others.
5	Uses Order Now	QRGeneration opens a QR preview and returns false, cancelling submission.

Functional requirements and acceptance evidence

ID	Requirement	Acceptance evidence
FR-1	Show a Book a Ticket catalog item.	Item opens with eight ordered variables.
FR-2	Use station reference data.	Source and destination resolve to the 27-record station table.
FR-3	Display a calculated fare.	Miyapur to JNTU College, Single Journey, one passenger displayed 11 in the observed check.
FR-4	Conditionally require payment detail.	Choosing Others reveals Enter Payment Mode.
FR-5	Show an exercise QR image.	Order Now opens the Metro QR Widget modal.
FR-6	Avoid claiming order completion.	The onSubmit script returns false; no final request is evidenced.

Data flow and platform

Service Portal form -> catalog variables -> station references -> Fare auto Calculation and Fields Visibility -> QRGeneration -> spModal -> Metro QR Widget. The QR payload uses the exercise example.com ticket URL; the image request uses api.qrserver.com.

Component	Role
ServiceNow Service Catalog	Book a Ticket item, eight variables, client scripts, and UI policy.
Custom station table	u_metro_station_details with u_station_name reference values.
Service Portal and widget	Passenger interface and QR image presentation.

Nonfunctional requirements and limits

Maintainability: keep station names in the reference table and QR display in a widget. Privacy: do not publish instance addresses, record IDs, credentials, or personal data. Usability: required fields and fare should be legible in the portal. Performance and accessibility have not been measured in this package; use the testing plan before claiming either.
